Software and Cloud Architect, Consultant, Developer, Strategist
MCP, PSM

I started my technology journey in manufacturing where I learned and applied the principles of lean process into software development practices. I continue to be a student of process improvement and am always looking for ways to make myself and the team around me better.

After working in manufacturing sales, accounting, engineering, CAD, and machine automation for over 10 years, I moved into an independent consultant and contracting role where I worked with various companies providing software architecture and development services along with consulting and business improvement scenarios. Domains included finance, government, aerospace, HVAC, and multi-level marketing.

Next up I partnered to start Headstorm, LLC, which provides professional service offerings for the business community. While there I focused on consulting, strategy, cloud implementations, enterprise architecture, and business process automation. Example domains served during that period include postal mail, ecommerce, furniture, sales & marketing, government, and banking.

Now with Lightbox Partners, LLC my primary function is Azure cloud services and development. I can also provide a range of software related services including architecture, automation, engineering, strategy, and analysis. Skills include the following: Leadership, Architecture, System Design, Cloud Implementations, Software Engineering, Process Automation, Systems Evaluation, Consulting Services, Strategic Analysis, and Management
